# Paper Airplanes

What you will need

- ☐ Colored Construction Paper
- ☐ Googly Eyes
- ☐ Markers
- ☐ Stick Glue

Let's Get Creative!

1 Cut the colored construction paper in long wide strips for the body of the plane and narrow shorter strips for the wings.

2 For the plane body, take one long strip and glue the ends of it together.

3 For the back wing, take a shorter narrower strip and fold it in half. Then, grab the paper at around 1/2 inch from the folded end and fold each side outwards, forming a "M" shape.

4 Glue the Middle folded part of the strip to form the Middle wing, and paste it to the back end of the body of the plane.

5 Take another strip and glue it on the upper part of the body to form the main wings of the plane.

6 To finish, glue a pair of googly eyes at the front of the plane and draw a cute smile. You can also draw the eyes on a piece of paper and glue it to the plane.
